Summary

Solution Engineer specializing in enterprise observability and data infrastructure using the Elastic Stack (Elasticsearch, Logstash, Kibana). Expert in architecting scalable data pipelines to ingest, process, and stream real-time data from complex sources like Kafka and SQL databases. Proven track record in implementing secure enterprise integrations including SAML and RBAC to build high performance monitoring solutions that deliver actionable operational insights and optimize system efficiency.

Skill

- **AI & MLOps:** RAG, LLM Evaluations, AI Agents, Arize Phoenix
- **Elastic Stack:** Elasticsearch (Vector Search), Logstash, Kibana, Index Management
- **Cloud & Infrastructure:** AWS, Docker, Linux, System Monitoring
- **Languages & Databases:** Python, SQL, MongoDB, JavaScript
- **Security & Access:** SAML, RBAC, Principal Mapping
- **Web Technologies:** React.js, Redux, Node.js

Experience

Solution Engineer

Feb 2025 – Present

QualityKiosk Technologies Pvt. Ltd., Mumbai, Maharashtra

Core Project: Axis Bank LOS (Loan Origination System) Dedupe System

- **Infrastructure Management** – Architected and optimized the underlying data infrastructure for the core banking Dedupe platform, ensuring high availability, rapid query response times, and seamless large-scale data processing.
- **ELK Pipelines** – Designed and deployed scalable data ingestion pipelines utilizing Logstash and custom Elasticsearch Ingest Pipelines to efficiently parse, structure, and route complex banking logs.
- **Kibana Dashboards** – Built comprehensive, real-time Kibana dashboards to visualize application health, track system performance metrics, and monitor deduplication success rates for cross-functional teams.
- **Security Configurations** – Successfully reconfigured SAML-based authentication, role mapping, and principal patterns during a critical corporate domain migration, securing highly sensitive financial data streams.
- **Proactive Alerting**: Engineered custom Elasticsearch Watcher rules integrated with SMTP to deliver real-time alerts for system anomalies and processing bottlenecks, significantly reducing incident Mean-Time-To-Resolution (MTTR).

SDE-Intern

Sep 2023 – Apr 2024

WWD Foundation, Remote

- Designed, developed, and maintained full-fledged responsive websites, managing their successful deployment and hosting infrastructure on AWS.
- Collaborated on backend development utilizing WordPress and MySQL for robust content management and optimized database configuration.

Projects

AI Agent & Evaluation

Mini-Project

- Built a basic AI agent and integrated Arize Phoenix to track its execution paths and view step-by-step traces.
- Used the Phoenix framework to evaluate the agent's performance, observing prompt effectiveness and basic retrieval quality.

Property Management Web Application

- Developed a full-stack MERN (MongoDB, Express, React, Node.js) property listing platform, integrating Firebase for secure user authentication.
- Engineered dynamic React.js UI components, utilizing Redux Toolkit for efficient global state management and seamless data flow.

Education

Nirmala Memorial Foundation College, Mumbai

Jul 2021 – Jun 2024

BSc in Computer Science

CGPA: 8.18

Certifications

- Database & Programming Certification (MySQL, MongoDB, Python) – Aptech Learning, Mumbai
